

Problem 1: Sum of Two Numbers (Using a Method)

Code:

```
import java.util.Scanner;

public class SumOfTwoNumbers{

    static int sumOfTwoNumbers(int num1,int num2){

        int sum=num1+num2;

        return sum;

    }

    public static void main(String args[]){

        Scanner sc= new Scanner(System.in);

        int num1;

        int num2;

        System.out.println("Enter the frist number");

        num1=sc.nextInt();

        System.out.println("Enter the second number");

        num2=sc.nextInt();

        int sum=sumOfTwoNumbers(num1,num2);

        System.out.println("The Sum of " +num1+ " and " +num2+ " is "+sum+".");

    }

}
```

Problem 2: Simple Age Checker (Using a Method)

Code:

```
import java.util.Scanner;

public class AgeChecker{

    static void AgeCategory(int age){

        if (age<18){

            System.out.println("You are a minor");

        }

        else if(age>18 && age<=69){

            System.out.println(" You are an adult");

        }

        else{

            System.out.println("You are a senior citizen");

        }

    }

    public static void main(String args[]){

        Scanner sc=new Scanner(System.in);

        System.out.println("Enter the age");

        int age=sc.nextInt();

        AgeCategory(age);

    }

}
```

Problem 3: Print Even Numbers (Using while Loop)

Code:

```
public class EvenNumbers{  
    static void printEvenNumbers(int i){  
        while(i<=50){  
            if(i%2==0){  
                System.out.println(i);  
            }  
            i++;  
        }  
    }  
    public static void main(String args[]){  
        int i=1;  
  
        printEvenNumbers(i);  
  
    }  
}
```

Problem 4: User Input for Positive Numbers (Using do-while Loop)

Code:

```
import java.util.Scanner;

public class PositiveNumbers{

    void askForPositiveNumber(){

        Scanner sc=new Scanner(System.in);

        int a;

        do{

            System.out.println("Enter a positive number ");

            a=sc.nextInt();

        } while(a<=0);{

            System.out.println("Your entered a positive number "+a);

        }

    }

    public static void main(String args[]){

        PositiveNumbers obj=new PositiveNumbers();

        obj.askForPositiveNumber();

    }

}
```

Problem 5: Print Multiplication Table (Using for Loop)

Code:

```
import java.util.Scanner;

public class MultiplicationTable{

    static void printMultiplicationTable(){

        int a;

        Scanner sc=new Scanner(System.in);

        System.out.println("Enter the number");

        a=sc.nextInt();

        for (int i=1;i<=10;i++){

            System.out.println(a+"*"+i+"="+a*i);

        }

    }

    public static void main(String args[]){

        printMultiplicationTable();

    }

}
```

Problem 6: Calculate the Sum of Numbers from 1 to N (Using for Loop)

Code:

```
import java.util.Scanner;

public class SumOfNumbers{

    static int calculateSum(int n){

        int sum=0;

        for (int i=1;i<=n;i++){

            sum=sum+i;

        }

        return sum;

    }

    public static void main(String args[]){

        Scanner sc=new Scanner(System.in);

        System.out.println("Enter a number: ");

        int n=sc.nextInt();

        int result=calculateSum(n);

        System.out.println("The sum of numbers form 1 to " + n + " is: "+ result);

    }

}
```
