

Assignment 2

Problem 1: Grade Evaluation System

Code:

```
public class GradeEvaluation{  
    public static void main(String args []){  
        int average=0;  
        int maths=80;  
        int science=85;  
        int history=90;  
        average=(maths+science+history)/3;  
        if(average>=90){  
            System.out.println("Grade A");  
        } else if(average>=70 && average<=89){  
            System.out.println("Grade B");  
        } else if(average>=50 && average<=69){  
            System.out.println("Grade C");  
        } else if(average>=30 && average<=49){  
            System.out.println("Grade D");  
        } else{  
            System.out.println("Fail");  
        }  
    }  
}
```

Problem 2: Leap Year

Code:

```
public class LeapYear{  
    public static void main(String args[]){  
        int year=2022;  
        if ((year% 4==0 && year%100!=0)|| year%400==0){  
            System.out.println("leap year");  
        } else {  
            System.out.println("year is not a leap year");  
        }  
    }  
}
```

Problem 3: Days of the Week

Code:

```
public class DaysOfTheWeek{  
    public static void main(String args[]){  
        int day=3;  
        switch(day){  
            case 1:  
                System.out.println("The day is Monday");  
                break;  
            case 2:  
                System.out.println("the day is Tuesday");  
                break;  
            case 3:  
                System.out.println("The day is Wednesday");  
                break;
```

```
        case 4:
            System.out.println("The day is Thursday");
            break;
        case 5:
            System.out.println("The day is Friday");
            break;
        case 6:
            System.out.println("The day is Saturday");
            break;
        case 7:
            System.out.println("The day is Sunday");
            break;
        default:
            System.out.println("Invalid day number");
    }

}

}
```

Problem 4: Identify the Values of Uninitialized Variables

Code:

```
public class UninitializedVariables {

    public static void main(String[] args) {

        byte a = 0;

        short b = 0;
```

```
int c = 0;
```

```
long d = 0L;
```

```
float e = 0.0f;
```

```
double f = 0.0;
```

```
char g = '\u0000';
```

```
boolean h = false;
```

```
System.out.println("byte: " + a);
```

```
System.out.println("short: " + b);
```

```
System.out.println("int: " + c);
```

```
System.out.println("long: " + d);
```

```
System.out.println("float: " + e);
```

```
System.out.println("double: " + f);
```

```
System.out.println("char: " + g);
```

```
System.out.println("boolean: " + h);
```

```
}
```

```
}
```
